RECEIVED MAY 05 2005

Hello to USDA or NOSB board members

This is to comment on reading of - 205.239  
of organic standards. I am a organic  
dairy farmer - certified with MOA we use  
rotational grazing and it seems to work nice.

I think all organic dairy cows should  
graze at least 30% of daily dry matter  
intake for 120 days. It seems to be so  
much healthier for the cows + then they can  
also make healthier milk.

Please help save the small farmers  
+ the real meaning of organic.

So Long
